

Aula M1A41 CLASSIFICACAO I

Leitura complementar:

- [Machine Learning Classifiers](#)
- [7 Types of Classification Algorithms](#)
- [Introduction to Classification Models](#)
- [4 Types of Classification Tasks in Machine Learning](#)
- [A Brief Introduction to Supervised Learning](#)
- [Supervised vs. Unsupervised Learning](#)
- [How to improve the performance of a \(Supervised\) Machine Learning Algorithm](#)
- [Analytics Building Blocks: Binary Classification](#)
- [Machine Learning — Multiclass Classification with Imbalanced Dataset](#)
- [Binary Classification Model: Australian Credit Approval](#)
- [A Practical Application of Machine Learning in Medicine](#)
- [Machine Learning Classification with Python for Direct Marketing](#)
- [How To Design A Spam Filtering System with Machine Learning Algorithm](#)
- [Classifying Loans based on the risk of defaulting](#)
- [Introduction to Logistic Regression](#)
- [Support Vector Machines\(SVM\) — An Overview](#)
- [K-Nearest Neighbors \(kNN\) — Explained](#)
- [All about Naive Bayes](#)
- [Data Science : K-Nearest Neighbor](#)
- [Machine Learning Basics with the K-Nearest Neighbors Algorithm](#)
- [StatQuest: K-nearest neighbors, Clearly Explained](#)
- [Most Popular Distance Metrics Used in KNN and When to Use Them](#)
- [Logistic Regression — Detailed Overview](#)
- [Why Sigmoid: A Probabilistic Perspective](#)
- [What is the Sigmoid Function?](#)

- [Log Odds: Simple Definition & Examples, Conversions](#)
- [WHAT and WHY of Log Odds](#)
- [Introduction to Logistic Regression](#)
- [The Complete Guide to Support Vector Machine \(SVM\)](#)
- [Support Vector Machines \(SVMs\)](#)
- [Understanding Support Vector Machine\(SVM\) algorithm from examples \(along with code\)](#)
- [10.1 Maximal Margin Classifier](#)
- [Support Vector Machine \(Detailed Explanation\)](#)
- [Support Vector Machine - Classification \(SVM\)](#)
- [A.I. Experiments: Visualizing High-Dimensional Space](#)
- [Hyperplane](#)
- [8.2 Planes and Hyperplanes](#)
- [Hyperplane](#)
- [Hyperplane](#)
- [Decision Boundary Visualization\(A-Z\)](#)
- [Support Vector Machine \(SVM\) - Fun and Easy Machine Learning](#)
- [Support Vector Machines, Dual Formulation, Quadratic Programming & Sequential Minimal Optimization](#)
- [Sequential Minimal Optimization](#)
- [Solving a Quadratic Problem \(QP\) in an open source linear solver](#)
- [Quadratic Programming](#)
- [LIBSVM -- A Library for Support Vector Machines](#)
- [Support Vector Machine: Complete Theory](#)
- [Section 3-5 : Lagrange Multipliers](#)
- [ROC Curve, a Complete Introduction](#)
- [Understanding AUC - ROC Curve](#)
- [Classification Accuracy is Not Enough: More Performance Measures You Can Use](#)
- [Data Science Performance Metrics for Everyone](#)
- [Measuring Model Goodness — Part 1](#)

- [The 3 Pillars of Binary Classification: Accuracy, Precision & Recall](#)
- [sklearn.svm.SVC](#)
- [Radial Basis Functions, RBF Kernels, & RBF Networks Explained Simply](#)
- [Most Effective Way To Implement Radial Basis Function Neural Network for Classification Problem](#)
- [Support Vector Machine: Kernel Trick; Mercer's Theorem](#)
- [Andrew Ng's Machine Learning Course in Python \(Support Vector Machines\)](#)
- [pandas.DataFrame](#)
- [pandas.DataFrame.from_dict](#)
- [collections — Container datatypes](#)
- [Introduction to Python's Collections Module](#)
- [sklearn.model_selection.train_test_split](#)
- [The 80/20 Split Intuition and an Alternative Split Method](#)
- [Splitting a dataset](#)
- [sklearn.linear_model.LogisticRegression](#)
- [sklearn.metrics.confusion_matrix](#)
- [sklearn.metrics](#)
- [sklearn.metrics.accuracy_score](#)
- [sklearn.metrics.precision_score](#)
- [sklearn.metrics.recall_score](#)
- [3.3. Metrics and scoring: quantifying the quality of predictions](#)
- [Accuracy, Precision, Recall or F1?](#)
- [sklearn.neighbors.KNeighborsClassifier](#)
- [K - Nearest Neighbors - KNN Fun and Easy Machine Learning](#)
- [kaggle - Pima Indians Diabetes Database](#)
- [Diabetes Data Set](#)
- [warnings — Warning control](#)
- [warnings.simplefilter](#)
- [○](#)
